

4000v solar integrated machine for home use

Overview

Are string inverters a good option for home solar?

When powered by full sunlight, string inverter systems are a cost-effective solution for home solar installations. An unobstructed south-facing view of the sun will maximize your solar power. If your system is partially shaded by trees, chimneys or other obstructions, the string inverter output will drop along with the output of the whole system.

How much power does a string inverter system use?

The system requires 230 square feet of space and produces 300 to 750 kilowatt hours (kWh) alternating current (AC) power per month, assuming at least five sun hours per day with the solar array facing south. When powered by full sunlight, string inverter systems are a cost-effective solution for home solar installations.

Is DIY solar installation right for You?

If you're handy with tools, love learning new skills, or enjoy managing and completing projects, DIY solar installation could be ideal for you. Many DIYers take satisfaction in the process and are proud of the results! Going DIY can save you \$10,000 or more, depending on system size.

Should I DIY my solar system?

Many DIYers take satisfaction in the process and are proud of the results! Going DIY can save you \$10,000 or more, depending on system size. Tax credits still apply for equipment, hardware and any other installation services you utilize. You get to make decisions on equipment selection, location of solar panels and timeline for your installation.
