

# Base stations of South Asian operators

### **Overview**

. . . .

How many 5G base stations are there in South Korea?

South Korean telecom operators currently provide 5G services via Non-Standalone (NSA) 5G networks, which depend on previous 4G LTE networks. Korean mobile operators have deployed a total of 202,903 5G base stations as of the end of February, according to previous reports.

Which region dominates the 5G base station market?

The Asia-Pacific region continues to dominate the global 5G base station market, with a projected CAGR of approximately 38% from 2024 to 2029. This region represents the most dynamic and fastest-growing market, led by significant deployments in China, Japan, South Korea, and India.

How many base stations are needed in South Korea?

Operators in South Korea were required to have 22,500 base stations by the end of 2021, 45,000 by the end of 2023, and 150,000 base stations upon completion of their 3.5 GHz spectrum rollout. Additionally, within three years, there were required to install 15,000 base stations utilizing 28 GHz.

How many 5G base stations are there in India?

The country's three operators have deployed 166,250 5G base stations which is approximately 19% of the country's 870,000 4G base stations. Deploying a new network technology is expensive for mobile operators.

How many 5G base stations are there in China?

The market is witnessing significant developments in base station technology and deployment strategies. By September 2023, China had built 3.189 million 5G base stations, with 22.6 5G stations per 10,000 people, demonstrating the scale of infrastructure deployment possible.

How big is the Asia Pacific 5G base station market?

The Asia Pacific 5G base station market size was exhibited at USD 14.80 billion in 2024 and is projected to be worth around USD 278.42 billion by 2034, growing at a CAGR of 34.13% from 2025 to 2034. Asia Pacific registered dominance in the 5G base station market by holding the largest share in 2024.
