## Overview

---

Yes, solar panels work in winter. They generate electricity even on cloudy days. Cool temperatures can improve efficiency. As winter approaches, many wonder about solar panel performance. Do they produce enough energy in colder months?

Solar panels rely on sunlight, not heat, to generate power. Can solar panels generate electricity in winter?

Solar panels clearly and consistently demonstrate that they can generate electricity in the snow, winter, and extremely cold climates. In winter storms, the grid may not fare as well as solar panels.

Why are solar panels more efficient in the winter?

In the winter, solar panels are less likely to reach high temperatures that can reduce their efficiency. 4 When panel temperatures exceed their ideal operating range, performance can decline. That's why, in cooler conditions, solar panels are often able to convert sunlight into energy more efficiently—assuming strong sunlight and clear skies.

Do solar panels work in cold weather?

From cold weather to extremes like below-freezing weather, solar panels turn sunlight into electricity for homeowners around the world. That's because solar panels absorb energy from the sun's abundant light, not the sun's heat. In fact, cold climates are actually the optimal environment for solar panel efficiency. 1.

Can solar panels handle snow?

Generally speaking, your winter solar panels will do just fine on their own, even during inclement weather. If your solar panels are covered in heavy snow, we advise against trying to remove it yourself, because you may scratch or damage the panels in the process. Most solar panels are efficient enough to handle snow on their own.

Do solar panels work if it rains?

Yes, solar panels work when it rains. Much like Pacific Northwest winter climates, many places throughout the U.S., like Georgia, Texas, and Southern California, experience a cooler rainy season during the winter months. Fortunately, solar panels still function efficiently despite the rain and other inclement weather in the fall and winter.

Do solar panels need to be cleaned after a snowstorm?

Keep your solar panels clean. Dirt and snow can block sunlight from reaching your solar panels, reducing their output. Be sure to clean your solar panels regularly, especially after a snowstorm. If you live in an area with heavy snowfall, be sure to remove snow from your solar panels as soon as possible after a snowstorm.
