

Charging pile split energy storage

Overview

Should you choose a split charging pile?

If you are looking for high scalability, strong compatibility, and long-term stability, the split charging pile is your best choice! If you want simple installation, low cost, and suitable for home or small business use, the all-in-one machine is more suitable for you!.

What is a charging pile?

A charging pile is a type of outdoor charging station with waterproof, dustproof, and corrosion proof functions and an environmental protection design, featuring a protection grade of IP 54.

What is the installation distance of the charging pile?

The minimum installation distances for the charging pile are: no less than 700 mm from the back door to the wall, and no less than 500 mm from the side face to the wall. (5) The canopy is built together with the charging pile. (6) This installation method is just a sample for reference.

What are the different types of charging piles?

Faced with the two types of charging piles, split charging piles, and integrated charging piles, many people are struggling: Which one is more suitable for their scenario?

Today, we will comprehensively analyze the advantages and disadvantages of the two to help you make a wise choice!.

What happens if the charging module is broken?

The split machine can replace or upgrade the module separately. If the charging module is broken, only the module is replaced, not the entire charging pile, which greatly reduces the maintenance cost. Suitable scenarios: Commercial charging stations that need to operate for a long time to reduce

the waste of funds caused by equipment updates.
