

Cuba s second batch of communication base station inverters connected to the grid

Overview

What happened to Cuba's power grid?

A woman prepares to catch a tossed frisbee during a massive blackout after a major power plant failed in Havana on Friday. MEXICO CITY — Cuba's power grid collapsed for a second time on Saturday, shortly after Cuban officials announced they had begun reestablishing service, in what has become one of the worst crises in the country's history.

How does Cuba get its power?

Officials said the state-owned power company UNE was using distributed generation to provide power to some areas of the island and that a gas-fired thermoelectric plant was starting operations. Cuba gets its power from huge thermoelectric plants like Antonio Guiteras and some smaller ones, which require crude oil to operate.

Why does Cuba have a power grid crisis?

While the collapse of the electrical grid comes as a surprise, the crisis is years in the making. Cuba's power plants are dilapidated and in desperate need of maintenance. In addition, Cuba produces very little fuel of its own, meaning it relies on imports to keep the electrical grid afloat.

What happened to Cuba's power plant?

The situation came to a head on Friday, when Cuba's largest power plant malfunctioned, joining several smaller plants already offline. Foul weather had also stalled the arrival of fuel from tanker ships offshore, starving the island's power plants. The combination prompted the entire grid to collapse.

What caused the power crisis in Cuba?

The crisis began on Friday when one of the country's largest power plants, the Antonio Guiteras power plant in the western province of Matanzas, failed shortly before midday on Friday. The failure prompted a total breakdown of

Cuba's electrical system.

How has Cuba regained electricity?

In the last 24 hours, Cuba has made significant strides in restoring electricity:
7:54 a.m.: Felton 1, part of the Lidio Ramón Pérez thermal power plant in Holguín province, was synchronized with the national grid, marking an important step toward stabilizing power after the total system disconnection on October 18.
