

Customized price of special-shaped photovoltaic panels

Overview

Can I get a solar panel in a custom shape?

Yes, it is possible to get a solar panel in a custom shape. At Voltaic, we manufacture both standard and custom small solar panels, with most being rectangular, but we have experience designing and deploying a full range of interesting shapes and sizes.

Why should I get a custom solar panel design?

Receive a custom prepared design for a solar panel system prepared by an experienced technician. This personalized solar design helps you to make an informed, unbiased decision to find the best solar power system at the lowest cost.

What shapes can Voltaic Systems make solar panels in?

At Voltaic, we manufacture custom and standard small solar panels and while most are rectangular, we have experience designing and deploying a full range of interesting shapes and sizes.

Why are custom-shaped solar panels more expensive?

We are happy to make custom-shaped solar panels, but they will be more expensive per Watt and generate less power per area than rectangular panels. A water jet or CNC machine is required to cut the urethane substrate or glass, making the process more complex and costly.

What are the different types of small Solar panels?

At Voltaic, we manufacture a full range of interesting shapes and sizes of small solar panels, including custom and standard ones. While most are rectangular for easier manufacturing and efficient space use, we have experience designing and deploying various shapes.

How are solar cells arranged in a panel?

Each solar panel is constructed of one or more strings (in series) of individual solar cells. Strung by hand or machine, the strings are in a straight line using equally sized cell pieces. Most standard small solar panels are rectangular in shape because they are easier to manufacture and offer the most efficient use of space.
