

# Germany s solar photovoltaic panels

## Overview

---

Germany introduced its in 2000 and it later became a model for solar industry policy support in other countries. As of 2012, the feed-in tariff costs about €14 billion (US\$18 billion) per year for and solar installations. The cost is spread across all rate-payers in a surcharge of 3.6 €ct (4.6 ¢) per kWh (approximately 15% of the total domestic.

As of May this year (2024), Germany has 88.9 GWp of installed solar capacity and is therefore well on track to achieve these high ambitions (see chart below). The nation's solar deployment goals are underpinned by robust financial support schemes and progressive regulatory frameworks.
