

High voltage power supply for portable devices

Overview

These power supplies (Table 1) all provide high, reliable power with low noise and excellent regulation and can be controlled from the front panel or remotely through a number of interface options.

Many of the models are capable of connecting to another model of the same kind in series to increase the voltage output or in parallel to increase the current output. For example.

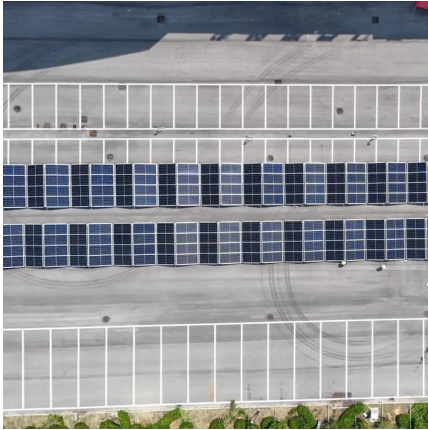

The multi-range feature of the PVS60085MR allows flexible and efficient configuration of voltage and current within the rated voltage and current range, since the instrument automatically recalculates voltage and current limits for each setting.

These high voltage power supplies are an exciting addition to Mouser's broad and growing portfolio of products to aid engineers from.

The dual range feature of the 9185 gives users the ability to select between higher current capability at a lower voltage range (up to 400V and 500mA) or higher voltage capability at a lower.
