Overview

How many batteries can a battery cabinet hold?

Like the previous generation, the battery cabinet can hold between 3 and 6 battery modules, equaling 9 to 18 kWh of energy storage capacity. Up to two battery cabinets can be connected to a single inverter, and two inverters can be used, for a total of 72 kWh of storage in a single installation.

How do you level a battery cabinet?

Remove the side panels that are adjacent to the other battery cabinets. Push the right-most battery cabinet into position. For seismic anchoring, ensure that the rear seismic bracket connects to the rear anchors. Lower the levelling feet until they connect with the floor - use a bubble-leveler to ensure that the cabinet is level.

How do you reinstall a battery cabinet?

Reinstall the left side panel on the left-most battery cabinet after interconnection. Push the third battery cabinet into position, align with the seismic anchoring (if any), level the battery cabinet, and interconnect with the other battery cabinets as described in step 2, step 3, and step 5.
