

How much does a 460w 1kw photovoltaic panel cost

Overview

A small residential solar panel system costs around \$14,210 before considering any financial incentives. On the bright side, that price effectively drops to \$9,937 after considering the full federal solar tax credit. Depending on your household energy needs, you might need a larger or smaller system. How much does a CPV solar system cost?

Concentrated photovoltaic (CPV) panels are \$0.80 to \$1.10 per watt. While not as well-known as other types of panels, CPV panels are highly efficient and may grow in popularity. A 6 kW solar system would cost \$4,800 to \$6,600. A single solar cell costs about \$0.30 and most panels use 60 or 72 cells. The more cells in a panel, the higher the cost.

How many watts is a 5.5 kW solar system?

For example, a 5.5 kW solar system is equivalent to a 5,500 Watt solar system. It's also important to distinguish between the PPW before accounting for incentives (the gross cost of the system) and the PPW after accounting for incentives (the net cost of the system).

How do I get a PPW solar quote?

PPW is a great tool for comparing solar quotes, and one of the easiest ways to lower the cost per watt of solar is to get quotes through solar.com. On solar.com, you team up with a dedicated Energy Advisor to design a custom system, compare live and binding pricing from vetted local installers, and manage your project for the entirety of its life.
