

# Indoor solar energy storage

## Overview

---

Do I need battery storage for my solar system?

If you want battery storage for your solar system, you just need to find the right battery and decide how much storage you need. Your installer can figure out how much energy you use, what your essential loads are—like lights, refrigerator, and Wi-Fi—and how much energy they use daily to determine storage capacity needs.

Why should you install solar batteries indoors?

Indoor installation of solar batteries offers several key benefits. These advantages enhance battery performance, safety, and longevity while addressing common concerns homeowners may have. Indoor installations maximize space efficiency. You can choose compact battery models that fit into small areas, such as garages or basements.

Can solar panels be used during a power outage?

When installed with backup power during outages. Unlock the power of the sun with SolarEdge's state-of-the-art home storage and backup systems - crafted specifically for American households. These advanced solutions capture any extra energy your solar panels generate during the day, helping your home stay powered 24/7.

Why should you choose a solar system for your home?

When designing your system, your installer can ensure you have enough battery storage capacity—and panels to charge them—to get you through the longest winter nights. When the sun rises, your solar will start to power your home again, and recharge the batteries with any excess production.

Should you install solar with batteries?

Having solar with batteries can enhance your energy independence, save you even more money, and, if configured for backup, help protect you against

outages in your area. Batteries can be installed outside (Enphase IQ Batteries, for example, are fully weather-resistant), or in a garage or basement.

How do solar batteries work?

Solar batteries store energy generated by solar panels for use when sunlight is unavailable. They help homeowners maximize energy efficiency by providing backup power during outages and reducing reliance on the grid. Should I install my solar batteries indoors or outdoors?
