

Inverter Outdoor Appliances

Overview

We've selected 9 off-grid inverters from 1.3kW to 12kW to satisfy all sorts of usage from the small outback cabin with a refrigerator and TV to large off-grid homes with multiple AC units.

What is a portable inverter generator?

Portable inverter generators are also a great way to power your campsite or charge battery-powered tools while you work. There are a lot of inverter generators to choose from, so I dug into the various makes and models available to find the best options for a few different categories.

What size inverter do I Need?

As we demonstrated in our list, there are inverters of all size, from 1.3kW to 12kW. For a small off-grid cabin without AC, we recommend 1kW to 3.5kW. For an off-grid house with a single AC unit, 5kW will do a great job. To power a large off-grid house with all the regular appliances and an AC, you'll need around 10kW of power.

How to choose the best off-grid inverter?

The maximum continuous output, together with the surge power of an inverter, is measured in watts. This affects the sum of all the AC loads that can be operated using the inverter at the same time. The most crucial factor determining the best off-grid inverter 's size is peak power consumption.

What are the best Inverter generators?

The best inverter generators that are good enough to make this list are worthwhile investments that will have your back when you need them most. The Generac GP 3000i is a versatile inverter generator that's perfect for powering a few electronics while you're RV camping.

How do I Choose an inverter generator?

The first step in choosing an inverter generator is figuring out how much power you need. Look for labels on the appliances and devices you want to

use, and add up the power ratings to get an idea of how much electricity you'll likely consume per hour.

What is the best solar inverter?

We've selected the EasySolar 12/1600, an all-in-one inverter that includes an MPPT solar charge controller and a pure sine wave inverter. All you need to do is plug in your batteries and solar panels. The batteries can be charged by the solar panels or an external AC source (generator, utility grid) as a backup.

Max. PV input power: 2000W
