What is an EV charging pile?

An EV charger or charging pile is a unit intended for supplying electric energy to an electric vehicle that requires charging in order to increase its stored energy. They act as intermediaries between the power grid and an electric vehicle (EV), controlling the current and voltage supply to ensure that charging is done efficiently and safely.

What is the difference between a charging pile and charging station?

A charging pile is a single charging unit for one vehicle, but a charging station consists of multiple charging units to cater to multiple vehicles. Charging stations typically have more complex infrastructure, including energy management, monitoring systems, and additional amenities.
