

# **Is it reliable to install solar photovoltaic panels**

## Overview

---

Are solar panels a good choice for your home?

Homes that have energy usage in excess of 500 kilowatt hours (kWH) per month are usually excellent candidates for solar panels. If the solar panel system produces excess energy, or more energy than the home uses, homeowners can sell the extra energy output to the local utility company each month.

Should you install solar panels on your roof?

Using an irradiance map can help determine how much sunlight a roof receives, and that data can be used by homeowners to discover if it's worth installing solar panels. Homes located in states with little to no rain or cloud cover—and without a lot of shade covering the roof—are prime candidates for solar panels.

Are solar panels right for You?

Solar panels are best for people who live in good solar states with solar-friendly policies, like net metering and solar incentive programs. Homes with south-facing roofs and lots of unshaded space are also ideal for solar. Homeowners with high electricity bills are among those who can benefit the most from going solar.

Are solar panels worth it if you move?

If you think you might move before you reach your payback period, purchasing a solar panel system may not be worth it. Instead, consider community solar, which doesn't lock you into a long-term investment. However, adding a solar panel system can still benefit you financially if you move.

Is a home solar energy system a good option?

A home solar energy system is one of the most popular and efficient

alternatives to traditional power sources. Solar panels have many environmental benefits and can save homeowners money over the long term. While costs have decreased over the past years, installing and maintaining solar panels can still be expensive.

Are solar panels a good investment?

According to the Consumer Price Index, electricity prices were up 2.8% for the 12-month period ending in March 2025. Depending on its size and your energy needs, a solar panel system can reduce or eliminate your electric bill. Residential solar panels allow you to pull less energy from the grid.
