

Is it safe for farmers to use outdoor power supply

Overview

Do farm equipment contact powerlines?

Even when you're away from the barn and farmhouse, farm equipment might still contact powerlines. Augers, combines, front-end loaders and aerial lifts are some of the equipment that needs caution around powerlines. Follow these safety tips to help avoid electrical safety hazards. Look up, look out! Identify all powerlines on the farm.

How far away should farm equipment be from overhead power lines?

Safe Electricity recommends keeping all equipment at least 10 feet away from overhead power lines, in all directions. Remember to take that minimum clearance into account when raising and lowering farm equipment, and always lower extensions to the lowest setting when moving loads.

How do I protect my farm?

The best protection is distance. Keep at least three metres between you and your tools and a powerline. The safest way to move a ladder, pole, pipe or rod from one location to another is to have two people carry it. Carry these horizontally to avoid contact with overhead wires. Confirm your farm's entire electrical system is properly grounded;

How dangerous is agriculture?

Every year, dozens of farmworkers are electrocuted and others are injured when they become electricity's path to the ground. Farmers work in settings that may border on idyllic, but the risks they face are real. In fact, agriculture is America's most dangerous industry, according to the National Safety Council.
