

Jordan s new energy power supply station

Overview

Can Jordan build a hydroelectric power station?

Jordan has no notable bodies of flowing water suitable for the construction of hydroelectric power stations. The only such plant is at the King Talal dam on the Az Zarqa River, with a capacity of 5 MW.

How is electricity used in Jordan?

Table 3: Electricity consumption by sector (in GWh) 2008-2013 The Jordanian national interconnected grid transmits electricity from the power stations to the distribution substations and transformer substations in the various regions of the kingdom via 400-kV and 132-kV power lines.

Does oil shale fuel power plants in Jordan?

Oil shale doesn't fuel a lot of power plants around the world, but in Jordan, it's a vital option, offering energy security and independence. The success of the Attarat Power Plant in capitalizing on this valuable indigenous resource led to its selection as a POWER Top Plant award winner.

What is the main source of energy in Jordan?

Jordan is a country whose fuel and electricity industries are mostly dependent on imported crude oil and natural gas. Its only important indigenous source of energy is oil shale. Yet, oil shale is abundant in Jordan.

Is AES a reliable power plant in Jordan?

AES Jordan generates approximately 8% of Jordan's electricity and is one of the most reliable power plants in the country. AES' portfolio in Jordan also includes a 241 MW Tri Fuel power plant, which entered in to commercial operation in July 2014.

How does the power grid work in Jordan?

In the north, the power grid is connected to the Syrian grid by means of a 230-kV and a 400-kV power line. In the south, there is a 400-kV connection to the Egyptian grid. The interconnected grid feeds the local distribution systems via which almost the entire population of Jordan receives its electricity.
