

# **North African Container Board Wholesale**

## Overview

---

What makes our containerboard products so special?

Tested in the lab and on our very own corrugators, our containerboard products meet and exceed all requirements for burst and tensile strength, tear resistance, folding endurance and high printability. And our high-performing products go hand in hand with outstanding services – on-site technical support, design and testing and customer service.

What are the segments of containerboard market?

The Containerboard Market is Segmented by Material (Virgin Fibers, Recycled Fibers, and Virgin + Recycled Fibers), Type (Kraftliners, Testliners, and Flutings), End-user Vertical (Food and Beverage, Consumer Goods, and Industrial), and Geography. The market sizes and forecasts are provided in terms of value (USD million) for all the above segments.

How competitive is the containerboard market?

The containerboard market is moderately competitive and consists of many major players. Few big competitors now control most of the market in terms of market share. These significant market participants are concentrating on growing their consumer base internationally.

What drives North America's demand for containerboard material?

Over the projected period, North America's demand for containerboard material is anticipated to be driven by consumers' growing awareness of the benefits of eco-friendly products. One of the top exporters of containerboard, particularly corrugated containers and kraft liners, is the United States.

What is a containerboard used for?

Our containerboards are used in virtually all packaging segments and applications for brand owners on a global scale, especially in demanding fresh-food packaging applications. In addition to our products, we provide our

customers with value-adding services that help get the most out of the packaging.

Why is containerboard the most popular packaging material?

Containerboard is becoming more and more common in the world of packaging. Due to its adaptability, portability, and durability, it is the packaging material that is used most commonly. In addition, it comes from a renewable resource. It is also the one packing material that is recycled the most.
