

Outdoor Power Supply European Version

Overview

How many external power supplies are there in the EU?

In 2020, 1.7 billion external power supplies (EPS) were in use in the EU27, of which 75% for residential use, on average 6.5 units per EU household. They converted 48 TWh/a of electricity from the 220V mains to the input needed by the powered products.

How to choose a portable power station in Europe?

Portability is a crucial factor when selecting a portable power station in Europe, as the weight and design directly influence how easily you can transport it. The weight of these units can vary significantly, with lightweight models around 25 pounds being much easier to carry compared to heavier options that exceed 100 pounds.

What factors affect your experience with portable power stations in Europe?

Often overlooked, battery capacity and type are fundamental factors that can significantly impact your experience with portable power stations in Europe. Battery capacity is typically measured in watt-hours (Wh), with higher capacities—like 3600Wh to 5120Wh—allowing for longer usage of your devices without needing to recharge.

How do I choose a power supply?

First, think about the total output power; options typically range from around 500W to over 7000W. This range directly impacts the types of devices you can power simultaneously. Next, look for the number and variety of output ports.
