

# Outdoor power supply installation in North Korea

## Overview

---

Does North Korea have a thermal power station?

While North Korea's thermal power stations continue to play an important role in the state's energy mix, the stations were built decades ago in collaboration with engineers from the former Soviet Union and China. The outdated technology makes them inefficient, and thermal capacity has not risen significantly in decades.

How much electricity does North Korea use?

For 2020, Statistics Korea estimates North Korea's total electricity supply at 23.9 terawatt hours (TWh), while Nautilus estimates only 14 TWh. Both agree that hydro supplies the largest portion of electricity to the country and are in broad agreement on the amount.

Are solar panels coming to North Korea?

Sprouting from rooftops and hanging from balconies, solar panels are no longer an unusual sight on homes across North Korea. In other parts of the world, the emergence of household solar panels has been part of a push for green energy solutions, but this is not the case in North Korea.

Why did North Korea stop building a nuclear reactor?

Under the Agreed Framework of 1994, the United States promised to provide North Korea with two 1-gigawatt light water nuclear reactors in exchange for Pyongyang abandoning its nuclear weapons ambitions. However, after the collapse of the Agreed Framework, reactor construction was suspended in 2003 and eventually terminated in 2006.
