

Real income from selling energy storage batteries

Overview

How does energy storage generate revenue?

In a word, revenue. Energy storage can collect revenue in America's organized power markets three ways: platforms, products, and pay-days. However, different projects will tap these potential revenue streams in different ways, and investors should seek nimble developers who can navigate a complex and evolving regulatory and market landscape.

How much money can battery storage arbitrage make?

One thing is clear: The closer to a real-time market storage operates in, and the higher the power ratio, the more revenue is available from arbitrage. For example, a battery storage unit with a 4:1 power ratio and 20% round-trip losses operating in the 2017 Houston load-zone real-time market could be making as much as \$57/kWh-year.

Can a project owner sell a battery?

Under many of these contracts, the project owner retains operational control of the storage facility and the right to collect and retain revenue from sales of electricity discharged from the battery. The project may be able to sell electricity to the same buyer of the resource adequacy attributes or to another buyer in the market.

What is a battery energy storage project?

A battery energy storage project is a system that serves a variety of purposes for utilities and other consumers of electricity, including backup power, frequency regulation, and balancing electricity supply with demand.

Can energy storage projects sell ancillary services?

In many regions, energy storage projects may be able to sell "ancillary services" in addition to energy or capacity either to transmission owners or to regional grid operators. For example, Swinerton's Mira Loma, California,

energy storage project.

What does the buyer receive in a battery contract?

In exchange for a fixed payment, the buyer receives the benefits of operation of the battery. Under these types of contracts, the project generally does not retain the right to additional revenue from the sale of electricity discharged from the battery.
