

# **Solar integrated machine tile standard**

## Overview

---

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

What are SunTegra® solar tiles?

SunTegra® Solar Tiles are integrated solar tiles that provide a durable roofing material and a low-profile, high-performance solar system in one.

What are hybrid solar tiles?

Hybrid solar tiles are roofing shingles that produce solar energy and mix solar and non-solar tiles to produce a roof that both produces energy and protects against the weather. For a neat and seamless look, hybrid solar tiles are made to fit the profile of flat concrete roofing tiles.

What is a Solar Tiled Roof?

A Solar Tiled Roof is a system that combines solar and roofing functionality into a perfect energy production system without compromising the visual appearance of your home. The building-integrated modules for tiled roofs interlock with nearly all concrete and clay tiles, leaving your home as beautiful as it ever was. Solar Tiled Roof is for homeowners looking to harness solar energy in an aesthetically pleasing way.

How do solar tiles work?

Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof. Photovoltaic cells in solar tiles turn sunlight into direct current (DC) energy.

## How many solar tiles do I Need?

The roof's kind, size, and placement determine the solar tiles you need. For example, to achieve a maximum power output of 0.114 kW (kilo-watt) per tile, a conventional roof would need between 16 and 24 solar tiles
