

Standard PV module prices in Togo

Overview

How much does a PV module cost?

The PV module costs span a significant range but cluster around USD 1.2 and USD 1.9/W. Battery costs show a significantly larger variation in installed costs; however it is the balance of all other system costs that show the largest variation.

Where can PV modules be produced in Africa?

Already, there are several local and international players with African plants for the production and assembling of PV modules (e.g., in Algeria, Mozambique, South Africa, Tunisia and Kenya).²¹ In addition to the price reduction of the final product as.

How much will PV modules cost in 2025?

Global average PV module prices could fall significantly to between USD 0.28 and USD 0.46/W by 2025 depending on the assumptions used and based on a top-down learning curve and bottom-up technology-based economic analysis (IRENA, 2016c).

Is a competitive cost structure for solar PV achievable in Africa?

Project developers are now targeting sub-USD 2/W cost ranges in East and West Africa. This suggests that with the right regulatory framework and access to finance, competitive cost structures for utility-scale solar PV are achievable throughout Africa.

What is a solar PV cost structure?

Other countries ⁴ In this report, the term “cost structures” refers to the individual cost components that contribute to the total installed costs of a solar PV system (e.g., modules, inverters, racking and mounting, cabling, installation costs, permitting fees, system design costs, etc.).

How much does a PV system cost?

The PV modules themselves, as well as the lighting fixtures and wiring, average around 20% (USD 2.2/W) of the total installed costs together, soft costs for 22% (USD 2/W), other hardware for 21% (USD 2/W) and the charge controller for 7% (USD 0.7/W).
