

UK outdoor power import

Overview

Electricity imports have reached record levels, with 19.8% of demand met by overseas sources over the three months to June. For the first time ever, more than a tenth of electricity came from France alone, and the cost of imported electricity rose to over £250 million per month. How much power does Great Britain import a year?

Net imports have accounted for 15% of GB power, enough for 10.8 million homes. This puts Great Britain on track to import nearly 36 TWh over the whole year, 46% higher than the previous record of 24.6 TWh set in 2021.

Will the UK import a record amount of electricity in 2024?

The UK is on track to import a record amount of electricity in 2024, smashing the previous record from 2021 by 50%.

Which country imports the most electricity to the UK?

National Grid operates six interconnectors with nuclear from France the leading source of imported electricity to the UK. Net electricity imports from France to the UK totalled 12.7 TWh last year according to government data, with nuclear making up the bulk of that power. France's grid is made up of around 70% nuclear.

How much energy does the UK import?

The UK is a large net importer of energy, having imported 33,000 GWh of electricity in 2023, compared to exports of just 9,000 GWh. At the end of 2023, a new 1.4 GW interconnector between Denmark and the UK became operational for the first time.

Why is the UK reliant on overseas energy supplies?

Partner, Co-head of energy and natural resources Despite the United Kingdom's (UK) favourable geography for many energy sources, it is heavily reliant on overseas energy supplies to meet growing domestic demand. This

reliance increases the UK general public's vulnerability to fluctuations in pricing and availability of supply.

Why is the UK so reliant on imports?

Although historically relatively self-sufficient in covering domestic energy demand, the United Kingdom's dependency on imports has increased in the past few decades. With oil and gas fields on the continental shelf depleting and the government phasing out coal, the country has grown increasingly reliant on supplies from other countries.
