Do portable power stations make camping better?

A good portable power station makes camping better. These devices power lights, phones, and small appliances when you're outdoors. We spent three months testing power stations to find the best portable power stations for camping. We tested 30 portable power stations over 12 camping trips.

How does battery chemistry affect a portable power station?

The battery chemistry inside your portable power station affects its performance across camping conditions: Lithium-ion (Li-ion) batteries offer excellent energy density, making them ideal for backpacking and ultralight camping where weight matters significantly.

What should I consider when buying a portable power station?

The most important thing to consider when shopping for a portable power station is the amount of power and battery capacity you need. The price range for portable power stations can range from a fairly inexpensive product to a large-sized investment.

What is the best portable power station?

If power and battery capacity are what you are after, the Delta Pro is the ultimate large-form power station. If you are searching for a compact portable power station for on-the-go activities, the Jackery Explorer 300 is our recommendation. This unit is ideal for charging phones and laptops or running small appliances like lights and fans.

How much power does a portable power station need?

For portable power stations, capacity is measured in watt-hours (Wh), telling you how much energy the unit stores. Weekend adventures typically need 200-300Wh for smartphone charging and LED lighting. Glamping and campground camping with amenities require 500-700Wh units to power fans,

portable coolers, and CPAP machines.

How do I choose the best camping power station?

Consider your storage space, particularly for RV camping where space is limited. Vertical designs maximize efficiency while horizontal configurations offer better stability on uneven surfaces. The best camping power stations provide diverse connections. AC outlets power larger appliances like portable cookers and coffee makers.
